Fugro Selects Paradigm Software as Global Standard for Depth Imaging

GeoDepth-driven technology to drive Fugro Seismic Imaging operations worldwide

(NEW ORLEANS: April 13, 2010) Paradigm™ (www.pdgm.com), a leading provider of enterprise software solutions to the global oil and natural gas exploration and production (E&P) industry, announced today that [Fugro](http://www.fugro.com) (www.fugro.com) has selected [Paradigm depth imaging technology](#) to enhance productivity and accuracy across global operations. The announcement was made at the [2010 American Association of Petroleum Geologists \(AAPG\) Annual Convention and Exhibition](#) in New Orleans.

“As an international company, our operations demand that software delivers precise results in a wide variety of geological environments,” said Andy Cowlard, Managing Director of Fugro Seismic Imaging worldwide. “We chose to deepen our commercial relationship with Paradigm because their tools provide the power and flexibility we require.”

The selected workflow is designed to provide geophysicists with a high-quality, globally deployable depth imaging and interpretation solution, backed by Paradigm’s network of local support offices. The solution combines the raw imaging power of the [Paradigm™ GeoDepth®](#), pre-stack depth migration suite, with the interpretation speed of the fast true waveform event propagator.

“Fugro is a diverse company operating in every major region around the world,” said James Lamb, Paradigm executive vice president for the Americas. “To support Fugro’s goals, we have delivered a comprehensive, universally applicable depth imaging solution that will cater for their current and future needs.”
