Premier Oil plc Expands its Portfolio of Paradigm Interpretation Software Solutions

Paradigm's Windows-based seismic interpretation solution efficiently handles large 2D/3D regional datasets and enhances interaction with other third-party applications.

(HOUSTON: September 24, 2013) Paradigm® (www.pdgm.com) announced that Premier Oil plc (www.premier-oil.com) is expanding its use of the integrated Paradigm® **SeisEarth**® interpretation suite running on Microsoft® Windows®. Premier Oil has, after a thorough review of all available options, selected the Paradigm [seismic interpretation](#) solution to be a part of its overall interpretation suite. The decision to add Paradigm was based on its ability to work with large 2D/3D regional datasets and interconnectivity with third-party applications. The announcement was made at the [Society of Exploration Geophysicists International Exposition](#) and 83rd Annual Meeting in Houston, Texas.

2D and 3D seismic data, structural interpretation and model in one integrated display in the 3D Canvas

“When testing the latest version of SeisEarth, we were particularly impressed by the system’s ability to work efficiently with large 2D/3D regional datasets in a 3D environment,” said Neil Oates, Chief Geophysicist at Premier Oil. “We believe that the range and ease of use of the tools available within the application’s 3D Canvas make this solution a market leader for true 3D interpretation. Having the ever dependable **VoxelGeo**® volume interpretation system available on a Windows platform is a considerable bonus,” he added.

“Paradigm SeisEarth provides a powerful interpretation experience on both Windows and Linux operating systems,” noted Mark Littman, sales director of Northern Europe. “Combined with our **Epos**® data management tools that enable easy data sharing with third-party applications, these technologies can seamlessly complement and add value to workflows currently being used by companies like Premier.”

Paradigm will be demonstrating the latest version of SeisEarth, together with its other advanced applications for the exploration and production of oil and gas, at the company’s SEG [booth #2842](#), September 22-25.
